SLEM

NBA 2K27 / Cronus Zen / v1.0 / tiktok/slem_2k / discord.gg/m9sH6FQVzU

What this is

- TEMPO is the script. That's the main thing.
- GREEN is a side option. Backup.
- Only one runs at a time. Turn one on, other one turns off by itself.

Menu

- LT + START - open / close (saves on close)
- LT + RT - go into a section
- LT + RB - back out
- LT + UP / DOWN - move
- LT + LEFT / RIGHT - change value
- LT + RT + LEFT / RIGHT - change faster

Leave the menu open, let go of LT, shoot. Hold LT again to change the number. Never close it. Tune way faster.

TEMPO

Main system. Use this.

How it works

- Hold the button. Stick drops on its own.
- Watch the meter. Tick moves up.
- Let go ON the white line. Not before, not after.
- Script does the flick. Same speed every time.

You do the line. Script does the flick. That's the split.

Settings

- ENABLE - on turns GREEN off
- BUTTON - X or LB. Default LB. Set it to X if you want, GREEN moves off it
- FLICK MS - stick travel speed. This is your tempo. Default 70
- HOLD MS - dwell at the top. Does nothing to tempo or timing. Leave 100
- QUICKSTOP - on / off. Default off
- QS SETTLE - stop length. Default 260
- REMAP X - LS or RS. Your real X goes here. Default LS

Tuning

- Tempo reads fast - raise FLICK MS
- Tempo reads slow - lower FLICK MS
- Timing reads late - let go earlier

- Timing reads early - let go later

Two problems. Two fixes. They don't cross.

Don't touch FLICK MS to fix timing. That's your tempo. You'll lose the wide window.

The white line

- Let go ON it
- Stick still travels after you let go, that's FLICK MS
- That travel carries it into the green
- Reading late every time? Let go a hair sooner. Same amount every rep, hands learn it quick

---

GREEN

Side option. Not the main one.

Press the button, script holds it N ms, script lets go. Fully auto.

Read this

GREEN is impossible to make consistent.

- One fixed number per shot type
- The animation ain't fixed
- Jumpshot, court position, contest, range, fatigue all move it
- Zen sees none of it

Set shots from the same spot it's solid. Everything else it drifts.

How it picks

RT	Left stick	Uses
off	still	STAND MS
off	left	MOVE L MS
off	right	MOVE R MS
on	left	FADE L MS
on	right	FADE R MS

RT has to be properly down and stick has to be properly moving for a fade. Stops accidental fades coming off a dribble.

Settings

- ENABLE - on / off
- BUTTON - X or LB. Default X
- STAND MS - set shot. Default 600
- MOVE L / R MS - pull ups. Default 680
- FADE L / R MS - RT fades. Default 740
- DEADZONE - how still counts as still. Default 20
- FATIGUE - OFF / LOW / MED / HIGH. Default OFF
- QUICKSTOP - on / off. Default off
- QS SETTLE - stop length. Default 260

- QS EXTRA - added on a quickstop shot. Default 40
- STEAL BTN - default LS
- DUNK BTN - default B

Notes

- DEADZONE - stick drift? Raise it. Otherwise set shots read as pull ups
- FATIGUE - adds time if you been sprinting, wears off when you stop. Zen can't read your stamina bar, it's going off turbo. Feel thing. Start LOW
- STEAL / DUNK - GREEN eats your X so steal moves to LS. They can't land on your shoot button, script blocks it

Tuning

- One shot type at a time
- 10 of the same shot, read feedback
- Late = lower. Early = raise.
- Start with STAND MS, easiest to repeat

QUICKSTOP

Sprint into a shot.

- Press the button
- Script kills your stick and turbo
- You stop
- Then it shoots

Works with TEMPO or GREEN. Whichever you got on.

- Left stick locks the whole shot. That's what kills the spins and stepbacks
- No fades on a quickstop. You standing still by then. Correct, not a bug
- Shooting before you fully stop? Raise QS SETTLE

MOVE

- STAMINA - OFF / SOFT / RAMP. Default OFF
- GROUND % - how much. Default 85

Turns your stick down so you burn less.

- SOFT drops it straight away
- RAMP gives full speed first, then eases. First step stays explosive
- 85 you barely feel. 70 more help but slower

DEF

- CUTOFF - on / off. Default off

Hold LT + RT, right stick gets 30% boost. Small flick reads as a full cutoff.

Only while both triggers down. Normal defence untouched.

SYS

- RUMBLE - default off
- IDLE ANIM - default on
- LED - light bar
- RESET - LT + RT to confirm

Headset crackling

- That's the Zen, not the script. Headset in the controller pulls too much through it
- RUMBLE off, IDLE ANIM off. That's everything the script can do

---

Quick start

1. Flash it
2. LT + START
3. TEMPO - ENABLE on, BUTTON X
4. FLICK MS 70 to start
5. Practice mode. Hold X, let go ON the white line
6. Tempo fast? Raise it. Slow? Lower it
7. Timing late? Let go sooner

Real

- Trash attributes and no badges? No script is greening that
- Your window comes from your build first
- Court position, contest and range move it too
- Zen sees none of it

This makes your good looks drop more. It don't turn a bad build into a shooter.
