SLEM CV on PlayStation

discord.gg/slem

> **Before anything else:** right-click `SLEM-CV\Start Setup.bat` → **Run as administrator** → **Yes**. The controller bridge registers a virtual controller driver. Windows only allows a driver registration from an elevated process, so this step is **required**. Done once per PC.

What this is

A PC program. It watches your PS5 on the PC screen, reads the shot meter, and lets go of Square for you at the right moment. Nothing is installed on the PS5.

It does **not** use Sony's PS Remote Play app. It uses **chiaki-ng**, a free app that shows your PS5 on the PC the same way.

Do the steps in order. One step at a time. Do not skip.

PART 1 — Install (once per PC)

Step 1. Unzip the SLEM folder somewhere permanent — Desktop or Documents.

Step 2. Open `SLEM-CV\` and right-click **`Start Setup.bat`** → **Run as administrator** → **Yes**.

This installs the controller bridge — the piece that hides your real pad from the game and gives it a virtual one. Without it SLEM opens, shows its overlay, and reads nothing.

If you double-click it by mistake, the script notices it isn't elevated and reopens itself with a permission prompt. Click **Yes** and carry on.

Step 3. Install **chiaki-ng v1.10.0** from `github.com/streetpea/chiaki-ng/releases`. Download the Windows installer, run it, Next, Next, Finish.

Step 4. Open chiaki-ng and register the PS5 the way the app asks (it shows a code on the PS5 under Settings → System → Remote Play → Link Device). This is the same pairing Sony's own app uses.

Step 5. Set chiaki-ng to stream at **1080p / 60fps**, and turn **Hardware decode** on.

PART 2 — Network (this is where most problems come from)

Step 6. PS5 and PC both on **Ethernet**. Not Wi-Fi on either end. Wi-Fi gives late shots and SLEM will learn the wrong timing.

Step 7. On the PS5: **Settings → System → Remote Play → Enable Remote Play** ON.

Step 8. Windows: turn **Game Bar** off (Settings → Gaming → Game Bar). Close Steam completely (tray icon → Exit).

Which controller

SLEM hides your real controller from the game and hands the game a virtual one. That works for:

- a PlayStation controller (DualSense or DualShock 4), USB or Bluetooth — **best choice**
- an Xbox controller on **Bluetooth**

It does **not** work for an Xbox controller on a USB cable, and you cannot use the PS5 controller over the stream — plug the controller into the **PC**.

No Cronus Zen, no Titan Two in the chain.

PART 3 — First session

Step 9. In 2K on the PS5, **Settings → Controller Settings**:

Setting	Set it to
Shot meter	**ON**
Shot meter type	**Arrow 2**
Shot meter size	**Large**
Shot meter position	**To the side of the player**
Shot feedback	**All shots**

Step 10. Open **SLEM Scripts.exe**. If Windows asks for confirmation before opening it, choose **More info → Run anyway**.

Step 11. Press **Log in with Discord** → **Authorize** → **This is my PC**. Match the 6-letter code shown in both places.

Step 12. Press the console button top right until it reads **PS5**. Read the red card, wait for the countdown, press **I take full responsibility.**

Step 13. In SLEM's Setup window, go through each step until it's green. Start chiaki-ng when the stream step asks, then press **Check again**.

Step 14. Hold Square and keep holding. SLEM lets go for you. Give it 10–15 shots while it learns.

Step 15. Press **Lock aims** when the timing looks right, then **Stop** when done.

Problems

What you see	What to do
SLEM doesn't see my controller	You didn't run Step 2, or ran it without administrator rights. Right-click `Start Setup.bat` → **Run as administrator**
Shots are consistently early or late	Wi-Fi somewhere in the chain (Step 6), or shot meter settings don't match Part 3
Black picture / no stream in SLEM	chiaki-ng isn't connected yet, or is set to a resolution above 1080p. Reconnect, then press **Check again**
"a wired Xbox controller cannot be hidden from the game"	Put the Xbox controller on Bluetooth, or use a PlayStation controller
Stream looks fine but SLEM reads nothing	Controller is plugged into the PS5 instead of the PC
