SLEM CV on Xbox - step by step

discord.gg/slem

What this is

A PC program. It watches your Xbox on the PC screen through the Xbox app, reads the shot meter, and lets go of X for you at the right moment. Nothing is installed on the Xbox.

Do the steps in order. One step at a time.

PART 1 - Install (only once)

Step 1. Install ViGEmBus. Go to github.com/nefarius/ViGEmBus/releases, download the newest .exe, run it, Next, Next, Finish.

Step 2. Install the Xbox app from the Microsoft Store if it is not on the PC yet, and sign in with the same account as on the Xbox.

Step 3. Xbox and PC both on an Ethernet cable. Not Wi-Fi. Wi-Fi = late shots.

Step 4. On the Xbox: Settings > Devices & connections > Remote features > Enable remote features ON, Power mode Sleep.

Step 5. Windows: turn Game Bar off (Settings > Gaming > Game Bar). Close Steam completely (tray icon > Exit) before every session.

PART 2 - Game settings (only once)

In 2K, Settings > Controller Settings:

Setting	Set it to
Shot meter	ON
Shot meter type	Arrow 2
Shot meter size	Large
Shot meter position	To the side of the player
Shot feedback	All shots (the TIMING box must show after every shot)

PART 3 - SLEM, first time

Step 6. Unzip the SLEM folder anywhere. Open SLEM Scripts.exe. Windows says "protected your PC"? More info > Run anyway.

Step 7. Press Log in with Discord. Your browser opens Discord, press Authorize, then This is my PC. The page shows a 6-letter code; the app shows the same code. Back in the app your name is in the top bar.

Step 8. Top right: the console button must say Xbox.

Step 9. The Setup window opens. Go through every step, top to bottom, until each is green. The Test step only watches: shoot 10 shots yourself and let go on your own timing. Press Next when it is done.

PART 4 - Every session

Step 10. Close Steam. Xbox app open, stream the Xbox, 2K in full screen on the main monitor.

Step 11. Controller off (or unplugged). Open SLEM, press Start, read the red card, press I agree.

Step 12. Turn the controller on. Hold X to shoot. SLEM lets go for you. Everything else is normal.

Step 13. Done: press Stop in SLEM.

First session: expect a few early or late shots while it learns your setup. Give it 10 to 15 shots.

Problems

- This is a test release. It can be inconsistent or not work on your setup. Do not open a ticket for it.
- Post in #cv-feedback what happened, and press Send issue in the app: it sends the log to us by itself.
